

North Star Engineered Products

Item No. _____

MODEL: RW-1000

Roller Wash System

The RW-1000 roller wash system is ideal for washing all products. It is especially designed to wash round products, such as melons, pineapple, tomatoes, citrus fruit, avacados and mangos. The live roller conveyor bed turns the product as it moves it forward. Product is loaded at the infeed end and rotates it as it moves forward through the wash tunnel. A divider can be added, so that two products can be washed simultaneously. A recirculation tank collects the water and recirculates it to the wash tunnel. A PAA monitor and control system can be added to the recirculation tank.

STANDARD FEATURES

- Stainless steel construction
- Turns round product to wash all surfaces
- Sanitary design
- Easy to clean
- Nema 4X control panel
- Easy load / easy unload

Options:

- Air knife over discharge conveyor
- Diverters at discharge per customer needs
